

FFY_ROUWENHORST AR1 Shock Discretization Example

back to [Fan's Intro Math for Econ](#), [Matlab Examples](#), or [Dynamic Asset Repositories](#)

This is the example vignette for function: [ffynetrouwenhorst](#) from the [MEconTools Package](#). See also [ffynettauchen](#) function from the [MEconTools Package](#). This function discretize a mean zero AR1 process, uses Rouwenhorst (1995). See [AR 1 Example](#) for some details on how the AR1 process works. And See [Kopecky and Suen \(2010\)](#).

Test FFY_ROUWENHORST Defaults

Call the function with defaults.

```
ffynetrouwenhorst();
```

```

Test FFY_ROUWENHORST Specify Parameters

With a grid of 10 points, the Rwouenhorst bounds on standard deviations are equal to Tauchen bounds of 3.
With the not extremely persistent shock process here, the Tauchen and Rouwenhorst Results are very similar.

```
[fl_ar1_persistence, fl_shk_std, it_disc_points, bl_verbose] = ...
    deal(0.60, 0.10, 10, true);
ffyr_rouwenhorst(fl_ar1_persistence, fl_shk_std, it_disc_points, bl_verbose);
```
